

Logiqs

We think logistics

Cultivation Systems | Warehouse Automation | Vertical Farming

1975 - The founding of Intransit

1995 - Alcoa Agro part of Alcoa

2004 - Logiqs Agro part of Huismangroup

2014 - Logiqs B.V. - fully independent

2D-Shuttle System

Modular, flexible and scalable logistical concept

2D-Shuttles ride under the benches and don't take up growing space

2D-Shuttles can drive to where the work is, so less fixed automation in the greenhouse

No investment needed to change the flow in the greenhouse

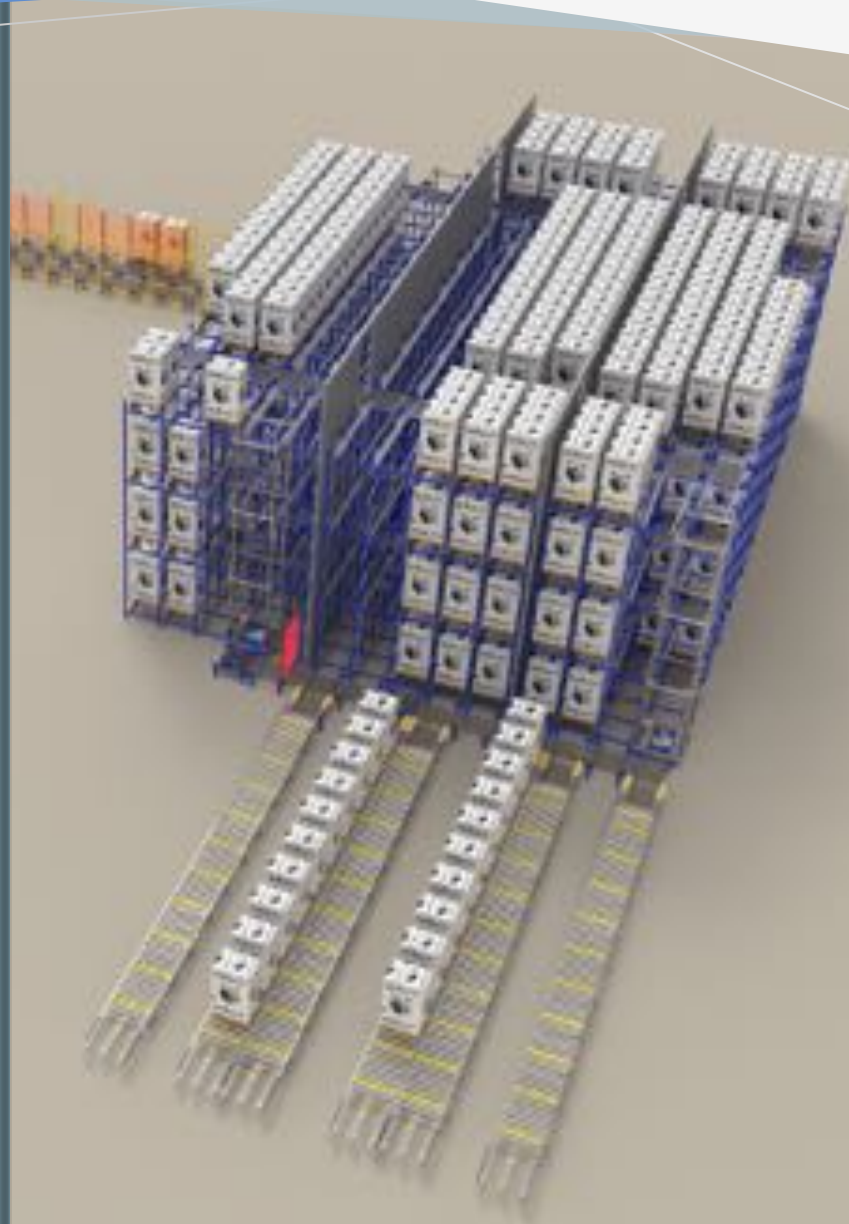

iCube

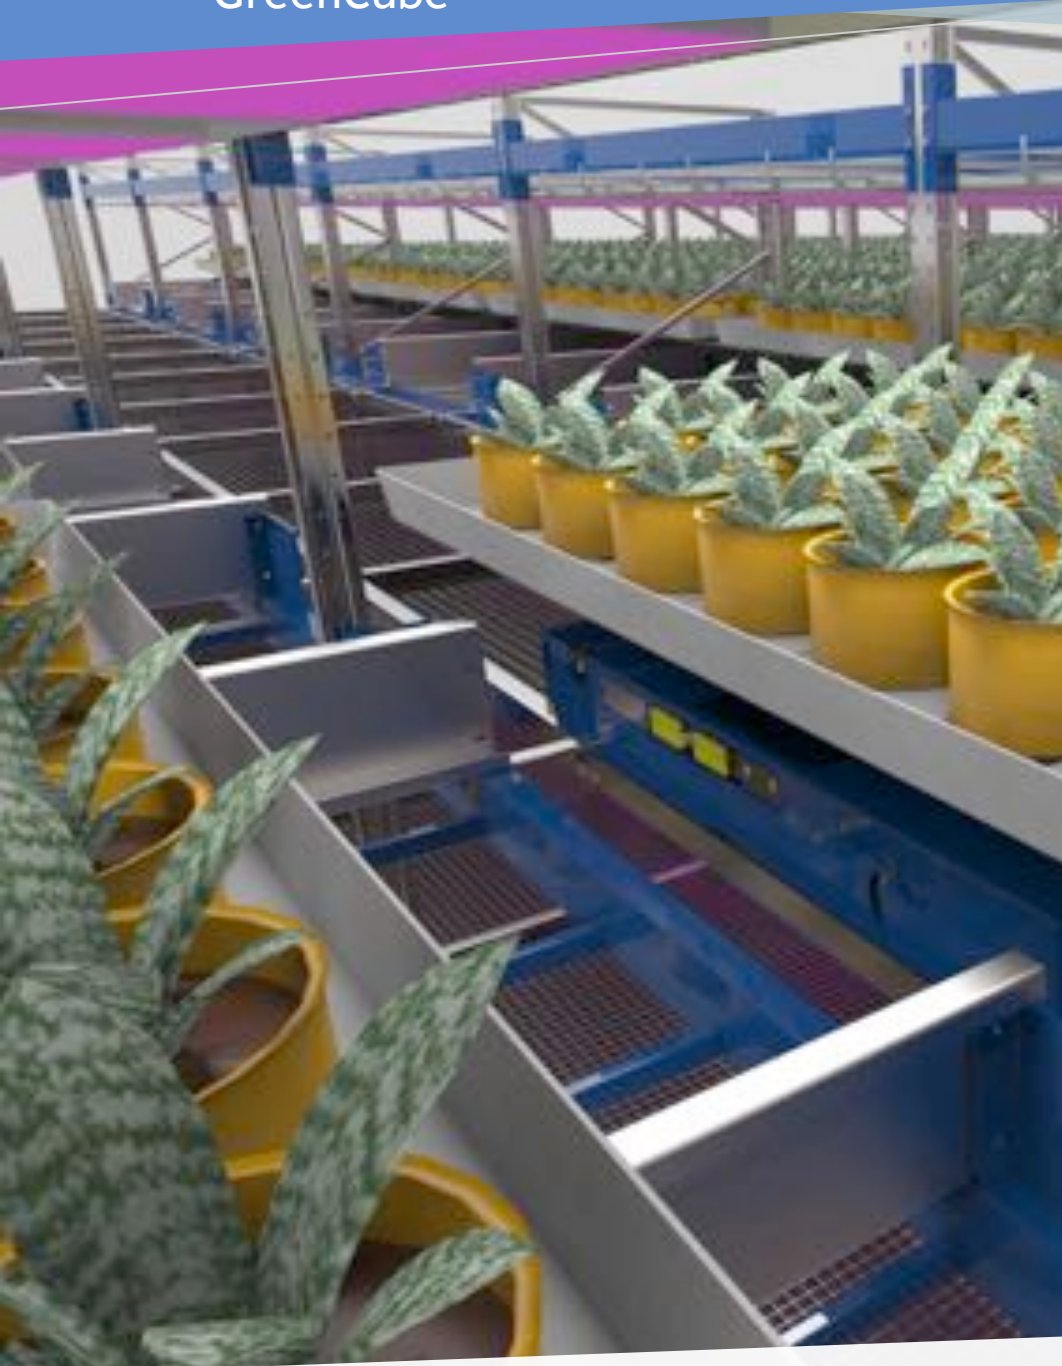

Lightweight frame using standardized components

Modular design concept for warehouse size and capacity/speed

Fully automatic using just the 3D-Carriers and Vertical Transporters

Maximum space usage when compared to other automated solutions

greencube[®]
vertical cultivation system

Combining the brilliant iCube design with ebb- and flood benches in order to create the first truly sustainable automatic vertical farming system

Maximum space usage

Standardized components

Modular and scalable design

Flexible system capacity for
production peaks

Fully automatic using just
3D-Carriers and Lifts
